The Right Task, First Time: A Smarter Service Selection

Have you ever selected a service task only to be faced with a confusing list of "Variant A," "Variant B," etc., wondering which one is correct for the vehicle in your bay? Or had to scroll through service activities that didn't apply to the car's specific equipment level?

With the next ESI[tronic] update, this irritation becomes a thing of the past.

We have completely overhauled this function to be much smarter. When you select a service task, ESI[tronic] will now automatically check the vehicle's actual configuration first. Based on this check, it will present you with only the single, correct service activity relevant to that specific car.

Your Benefit:
This enhancement removes all the guesswork. You will no longer see irrelevant options or confusing variants, which saves you valuable time and increases the reliability of your service process. You can proceed with the correct task immediately, with more confidence than ever before.

Your Feedback Matters: A New, Faster Way to Improve ESI[tronic]

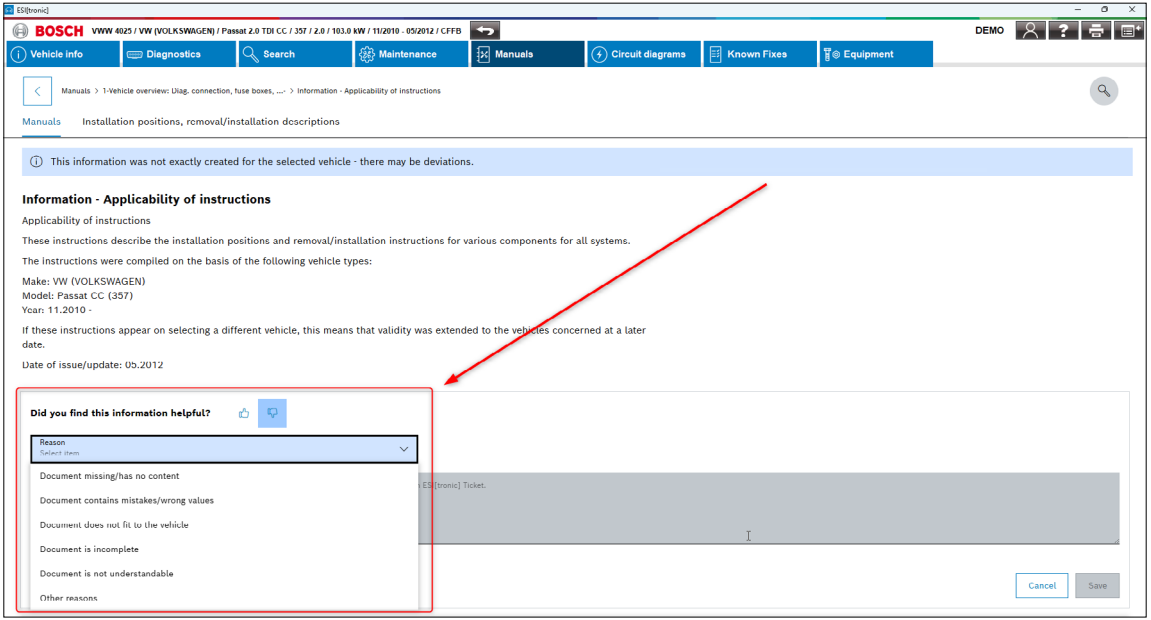
Your feedback is essential for the continuous improvement of ESI[tronic]. You are already familiar with the "thumbs up/ thumbs down" option to rate the information you see. To make your feedback even more powerful, we are introducing a small but significant enhancement.

Previously, when information wasn't helpful, we couldn't know the exact reason without you taking the time to write a detailed message. With the upcoming update, we've made this process much faster. Now, after clicking "thumbs down," a new dropdown menu will appear. With just one more click, you can tell us precisely what the issue is—whether the information is incorrect, incomplete, or belongs to a different vehicle.

Your Benefit:
This feature allows you to give specific feedback in just two clicks. It directly helps our development teams to pinpoint and fix issues much more effectively. The result is a faster improvement of the data you rely on daily, making ESI[tronic] an even more reliable tool for your workshop.

Please use this new function to help us make ESI[tronic] better for you.

Your Feedback Matters:
A New, Faster Way to Improve ESI[tronic]



Direct from the Source: Original Documents Now for Citroën and Kia

We are pleased to announce a significant expansion of our "Original Documents" feature. With the latest update, you now have direct access to original manufacturer documents for Citroën and Kia, bringing the total number of supported brands to 18. This enhancement gives you first-hand access to the most reliable information, such as original circuit diagrams and instructions, directly from the source.

For workshops servicing Light Commercial Vehicles (LCVs), this update brings expanded coverage for Citroën, including popular models like the Jumper, Jumpy, Berlingo, and Nemo.

Your Benefit:
This expansion further increases the value of your ESI[tronic] software by providing OE-level information for two more major brands. You can perform maintenance and repair work with greater efficiency and confidence, knowing you are using the best possible data for professional results.

Please note that country-specific restrictions may apply to the availability of some documents.

Your Workshop's Future: Experience it at Automechanika 2026!

How can you increase your workshop's efficiency and prepare for the vehicles of tomorrow? Find the answers at Automechanika in Frankfurt, Germany. From September 8th to 12th, 2026, we invite you to discover the innovations that will directly impact your daily business.

Visit us at the **Bosch booth** in **Hall 9.** See how our product portfolio can help you save time and which new, profitable services you can offer to your customers. This is your best opportunity to speak directly with the experts behind our products—bring your questions and get answers straight from the source.

We will have the latest ESI[tronic] updates on display to show you how you can master even the most complex diagnostic tasks faster than ever.

Plan your visit today. We look forward to discussing the future of your workshop with you in Frankfurt, Germany!

An Important Update on Your Maintenance Information

A note for our ESI[tronic] Master package customers: As you may have recently noticed, we have made some adjustments to the "Maintenance" section. We are taking this opportunity to share some background on this update.

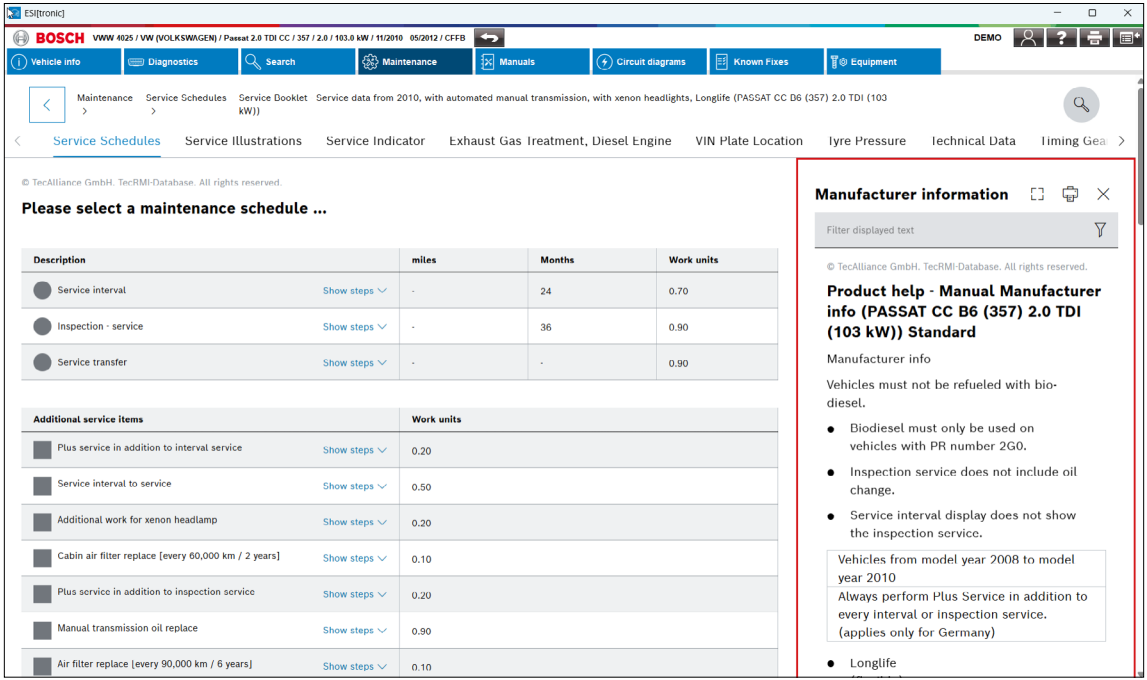
As part of our continuous effort to provide the highest quality data, these changes were implemented to ensure accuracy and compliance. While you may see slight differences in how data is presented, we want to assure you of one crucial point: all information remains fully OE-compliant.

To further support you, we've introduced the new 'Manufacturer Information' section, now available on the right side of the maintenance plans. This area provides valuable guidance to help you select the correct combination of service steps and build a manufacturer-compliant service plan. For more information, please visit our **Help Center.**

Please pay special attention to this new section when working on vehicles from the VAG Group, as it contains essential information. To create the correct service schedule for these vehicles, you will need the PR number from the sticker in the service handbook or trunk tray.

Adhering to the manufacturer's specifications is vital for vehicle safety and for retaining the vehicle's warranty. The "Maintenance" module continues to be your central, reliable resource for this. It provides official OE service schedules and a vast range of information in a single, convenient tab, ensuring every service you perform is both efficient and compliant.

An Important Update on Your Maintenance Information



Bosch Connected Repair Update: Your Vehicle Reports, Safe and Accessible in the Cloud

Have you ever wasted time searching for a vehicle report that was saved on a different diagnostic tablet? Or worse, lost valuable vehicle histories because a device was broken or reset? The latest update for Bosch Connected Repair puts an end to this.

From now on, your vehicle reports are automatically and securely saved to the Bosch Connected Repair Cloud every time a vehicle is identified in ESI[tronic].

The benefits for your workshop:

- Complete Data Security: Your reports are always safe and backed up, even if a diagnostic tablet is lost or damaged.
- Workshop-Wide Access: You can retrieve a vehicle's complete service history from any PC or diagnostic unit in your network, not just the one used during the last service
- Faster Workflow: When a customer returns, their vehicle's full history is instantly available, streamlining your check-in and diagnostic process.

This all happens automatically in the background, providing more security and efficiency for your workshop's data with no extra effort required from you.

Stay Current:
Rapid Coverage for New Vehicle Models

Our initiative to bring you coverage for the very newest vehicle models at high speed continues. We are excited to announce that just weeks after their market launch, the following models are already available for diagnosis in ESI[tronic]:

Vehicle Model	RB Key	Market Launch	Available in ESI[tronic]
Renault Twingo	REN0242632	April 2026	June 2026
Audi RS5 Avant	AUD0241793	April 2026	June 2026
Audi RS5	AUD0241794	April 2026	June 2026

Our focus is on providing the essential systems and functions required for the most common service and repair tasks on these brand-new vehicles.

This new coverage will be delivered to you seamlessly via the usual updates through the Diagnostics Download Manager (DDM). This ensures your workshop is always equipped to service the latest vehicles on the road.
